

# CMC White Paper 2.0

## C-Chain (Exchange) Expanded

### C-Chain Exchange interface

#### C-Chain Explained:

C-Chain Exchange is a one of a kind and the first to offer Fiat/Crypto Deposits and withdrawals, crypto purchases directly on the exchange platform, as well as easy, fast and convenient way of transferring your funds into traditional bank accounts.

Please have a look at the working demo

<https://dproto.devgenesis.com/>

We intend to solve several problems, but the first and the biggest problem is Fiat Withdrawals to bank accounts, that usually takes from 24hours to several days and it requires transfers of your Cryptocurrency to additional exchanges that always results in additional withdrawal and transfer fees.

We are in the process of building a Crypto/Fiat Exchange that solves that problem and in a cost effective and faster manner, it will feature multi pairing GB/Crypto EUR/Crypto and vice versa (for now) more fiat pairings will be available and added as we progress.

Users will be able to sale their cryptocurrency on our exchange and instantly withdraw to their bank accounts.

Companies and traders will benefit from cheaper and more efficient trading and listing fees, the trading fee will be a small almost invisible 0.02 per trade and a rather traditional take will be implemented, a simple flat monthly subscription fee, price will range from free for small trader with up to \$5k trading volume to \$99 per month for the most advanced traders with no limit trading volume, furthermore C-Chain exchange will be fully insured.
